Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	Ctrl+S
Project / Solution Name	Aiversecity
Name (Leader)	Yong Jia Wei
Email & Phone (Leader)	contact@davidyong.dev / 01110576001
University Affiliation(s)	Xiamen University Malaysia
Live Prototype URL	https://ctrls-aiversecity.replit.app
Code Repository URL (public / access granted to judges)	https://github.com/davidy1402/ctrl-s-sdc2026

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

Aiversecity is a web app that helps students explore possible career directions. Users answer a short assessment, and the app suggests three pathways: Data Analyst, Software Developer, and Operations Research Analyst. The matching happens in the browser using simple scoring rules created by the team. The result is meant to help users think about their next steps. It is not a job prediction.

The app also has small endpoints that read selected public information from the BLS Data Scientists page, UN News, and MOSTI RSS feeds. This information gives users extra career and technology context.

The project is run on Replit. It does not have user accounts, a database, a runtime AI model, or a GPU workload. The main flow is simple: users answer the assessment → the browser calculates the results → the app shows suggested pathways and learning areas.

Live prototype: https://ctrls-aiversecity.replit.app
Demo video: https://youtu.be/D1d8F0OJGY8

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
React / React DOM 19.3.1	Building the website interface	MIT
TypeScript 5.9.3	Writing the application code	Apache License 2.0
Vite 8.3.5	Running and building the project	MIT
Tailwind CSS 4.3.3	Styling the website	MIT
fast-xml-parser 5.11.2	Reading RSS feed data	MIT
Playwright 1.64.1 / tsx 4.23.15	Testing the project	Apache License 2.0 / MIT

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
BLS Occupational Outlook Handbook	Career information used in the app	Free and public
UN News RSS	News headlines shown as career context	Free and public
MOSTI RSS	Malaysian science and technology headlines	Free and public
Google Fonts	Website fonts	Free and public

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	We imported the project, worked on it there, and used it to run the live demo.	@davidyongjiawei/ctrl-s-sdc2026
GitHub	We used GitHub to store and share the project code for judges to review.	Public repository

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
None	N/A	The live app does not use a runtime AI model.	N/A

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Fictional demo profiles	Synthetic data created for testing and demonstration	Synthetic	N/A	N
BLS Occupational Outlook Handbook	https://www.bls.gov/ooh/	Public	U.S. government public domain	N
O*NET occupation descriptions	https://www.onetonline.org/	Public	O*NET data license	N
BLS occupation descriptions	https://www.bls.gov/ooh/	Public	U.S. government public domain	N
UN News RSS	https://news.un.org/en/rss	Public	UN News terms of use	N

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
MOSTI RSS	https://www.mosti.gov.my/en/feed/	Public	MOSTI copyright notice	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☒ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
OpenAI Codex, version not recorded	Coding, testing, review, and documents	Major
ChatGPT, version not recorded	Planning, content, and organiser questions	Major
Figma Make, version not recorded	Interface design and design exploration	Major
Google Gemini, version not recorded	Project support used by team members	Moderate
Antigravity, version not recorded	Project support used by team members	Moderate

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

AI tools helped us draft, code, and design parts of the project. Before using any output, we checked it against the actual app and changed or removed anything that did not fit. We tested the main user flow on the live site and reviewed the final links and declarations ourselves. The team is responsible for everything submitted.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☒ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Replit	Development and cloud platform	We imported the project into Replit, worked on it there, and used it to run the live app.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit was the platform we used to build, run, and share Aiversecity. The scoring rules could run on another platform, so Replit is not essential to the logic itself. However, Replit was the platform used for this submission. We did not use RunPod because the app does not need GPU computing.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The demo asks only for a fictional name, assessment answers, and self-reported skills. It does not ask for CVs, contact details, login information, or identity numbers. The answers stay in the browser for the current visit and disappear when the page is refreshed.

The app has no database or user account system. Assessment answers are not sent to BLS, UN News, or MOSTI. Those sources are read only for public career and news context. Users are told not to enter real personal information.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The app does not use a runtime AI model, so hallucination is not a risk in the live product. Its main limits are that it covers only three career pathways and uses scoring rules created by the team. These rules still need to be tested with more students.

Some career information comes from U.S. sources, so it is general context rather than proof of Malaysian job demand. Public news and career sources can also change or become unavailable. To reduce confusion, the app explains that its results are guidance for exploration, not job predictions.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.

25 October 2026
