Aiversecity

Career exploration with visible evidence

A fictional profile. Three role families. A first practice step.

The career exploration problem

1 in 4

workers globally are in occupations
with some GenAI exposure

A learner still needs to judge
which evidence applies locally
and what to practise next.

ILO, 2025. Exposure describes task potential. It does not measure Malaysian job losses.

A learner’s decision journey

01

Profile and evidence

Four workplace questions
Editable synthetic skills
Dated public trend source

02

Role exploration

Three supported role families
Explainable alignment scores
Visible skill gaps

03

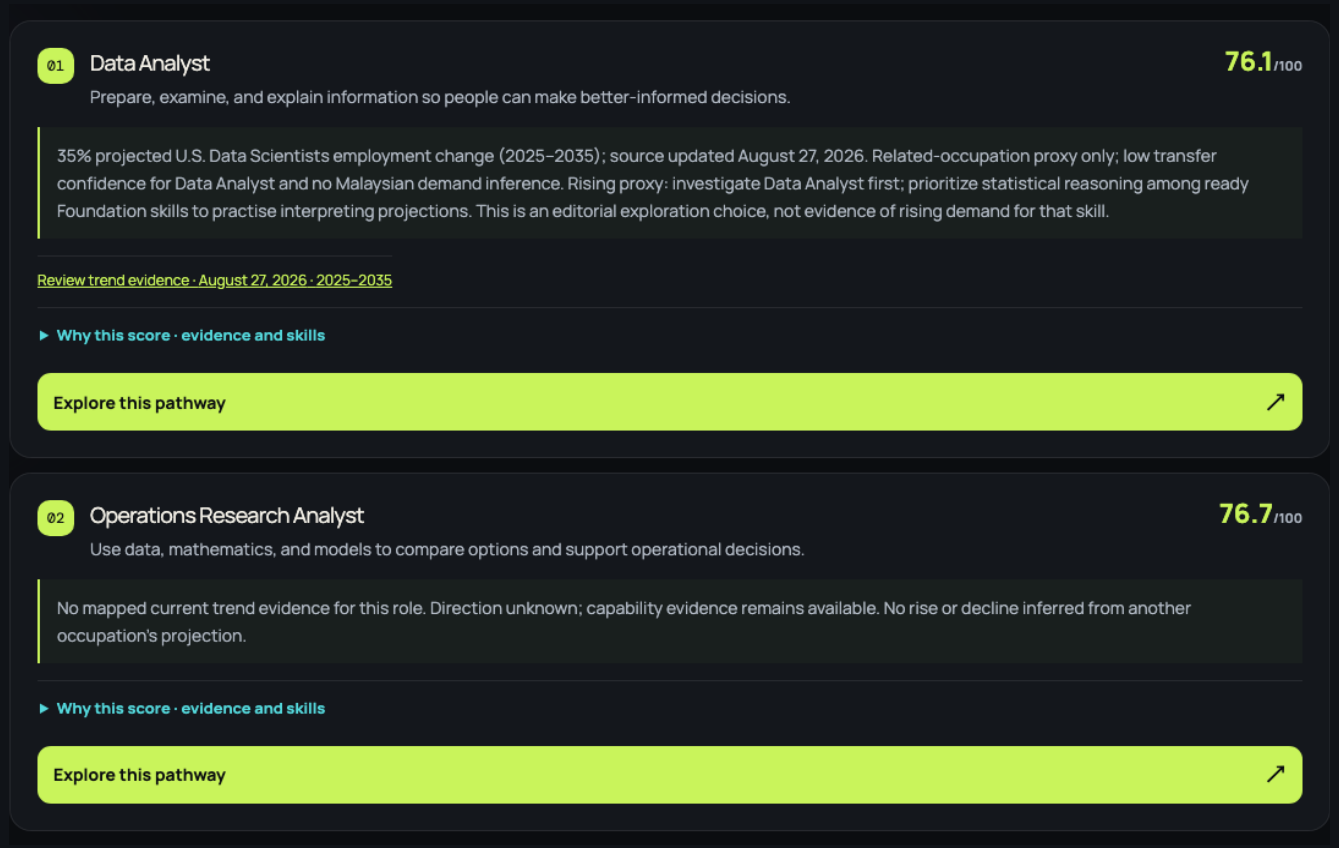

A practice pathway

Prerequisites and public resources
Role and skill SDG explanations
Two qualitative scenarios

Personal alignment and trend evidence

Alignment stays personal

Fresh BLS evidence changes exploration priority.
Other roles: direction unknown.

Actual local UI, fictional profile. U.S. Data Scientists proxy, low transfer confidence for Malaysia.

A pathway the learner can inspect

Foundation

Practise the basics with explicit prerequisites

Specialization

Apply role-specific tasks and check the evidence

Capstone

Combine the skills in a fictional project

Estimated practice time and self-reported completion do not verify mastery or job readiness.

Proposed SDG contribution

4.4

Employment-relevant technical and vocational skills

Each practice step explains the capability it develops.

Supporting role links: Target 8.2 productivity and Target 9.5 technological capability.
No learning, employment or SDG indicator improvement has been measured.

Application architecture

Fictional profile
and four questions

>

Deterministic rubric
and role weights

>

Alignment scores
and skill gaps

Fixed BLS fetch
RSS context separately

>

BLS evidence dates
and eligibility rules

>

Exploration priority
and ordered practice

Session memory only. Fixed-source APIs cache for 30 minutes. No runtime model, database or GPU.

Phase 2 evaluation targets

20%

lower median decision-task time versus browsing the same sources

80%

comprehension pass rate on score, geography and prerequisite

Proposed goals, not results. No measured local baseline yet. Report paired sample sizes and failures.

Limits and submission gates

Evidence coverage

Three roles, editorial rubric
U.S. related-role trend proxy
Skills demand remains unmeasured

Release gates

Actual Replit use and proof
Mandatory sponsor identity / access
Team declarations and public access

Review status as of 23 October 2026 MYT. Update only with verified evidence before recording.

A decision the learner can explain

Which role should I explore, and what should I practise first?

Response evidence, trend scope and a visible first step
