Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission deadline: conflicting official times - internal target 24 October 2026 22:00 MYT

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick “No” or write “None” – do not leave it blank. Submit as a single PDF document named “SDC2026_TeamName_TechDeclaration.pdf” together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	Ctrl+S
Project / Solution Name	Aiversecity
Name (Leader)	Pending leader confirmation
Email & Phone (Leader)	Pending leader confirmation
University Affiliation(s)	Xiamen University Malaysia - confirm all affiliations
Live Prototype URL	Pending verified team deployment
Code Repository URL (public / access granted to judges)	https://github.com/davidy1402/ctrl-s-sdc2026 (private at preparation; public release pending)

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

React and TypeScript provide the session-only interface. Vite serves the development/preview application and server middleware. GET /api/trends fetches one fixed BLS occupation page, parses the dated projection and caches successful evidence for 30 minutes. GET /api/news retrieves fixed UN News or MOSTI RSS, filters titles and returns at most three dated links. Failed refreshes preserve a dated fallback or return insufficient evidence. No assessment answers go to those services.

The deterministic assessment produces three dimension scores. Role weights produce explainable alignment scores. A separate trend interpretation layer attaches eligible evidence and can alter exploration or learning priority without representing personal employability. Pathway ordering respects prerequisites and self-reported skills. Two explicit planning scenarios change rubric emphasis. Public occupation, learning and UN target links support explanations. State clears on reload. There is no database, user authentication, runtime model or GPU workload. Replit configuration exists, but actual deployment and platform evidence require confirmation.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
React / React DOM 19.3.1	Session interface	MIT
TypeScript 5.9.3 / Node.js 22 target	Types / runtime	Apache-2.0 / MIT + notices
Vite 8.3.5 / React plugin 6.1.2	Server and build	MIT
Tailwind 4.3.3 / Vite plugin 4.3.3	Styles	MIT
fast-xml-parser 5.11.2	Official RSS parsing	MIT
Playwright 1.64.1 / tsx 4.23.15	Browser / TypeScript tests	Apache-2.0 / MIT

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
BLS OOH public HTML	Dated U.S. occupation projection	Public unauthenticated fetch
UN News official RSS	Global AI context titles	Public feed, attribution
MOSTI official RSS	Malaysia science/skills context	Public feed, attribution
Google Fonts CSS/font files	Manrope and DM Mono	Public font hosting / OFL
None	No runtime GenAI API	None

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit (required intended runtime)	Import/run/proof pending	Team account/plan/region to confirm
GitHub	Private source and review history	Private; public judge access pending
Vercel-compatible adapters	API handlers exist, no deployment claimed	None verified
Storage/database/authentication	None	None
GPU / RunPod	None used in runtime	None; official scope to clarify

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
None	None	No runtime AI model	None
None additional	None additional	None additional	None additional
None additional	None additional	None additional	None additional
None additional	None additional	None additional	None additional
None additional	None additional	None additional	None additional

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Fictional demo profiles	Created for demo/test	Synthetic	Project Apache-2.0	N
BLS occupation projection	bls.gov/ooh/math/data-scientists.htm	Public	U.S. public information; attribution	N
Occupation descriptions	O*NET / BLS, full URLs in source register	Public	Provider terms; attribution	N
UN / MOSTI RSS titles	Official feeds, source register	Public	Publisher terms; linked excerpts only	N
UN targets / ILO context	sdgs.un.org / ilo.org, source register	Public	Attribution; linked context	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

Yes - generative AI development assistance, major use, disclosed below.

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
OpenAI Codex, GPT-6 family	Code, tests, review and documents	Major
ChatGPT, exact team usage to confirm	Prior planning/content assistance	Pending team inventory
Figma design tooling, version to confirm	Imported UI/design provenance	Pending team inventory
Other member tools	Each member must confirm	Pending
None additional verified	No undisclosed runtime model claimed	None

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

Codex generated substantial code, tests and submission text. Automated checks and source reviews provide engineering evidence, but registered team members must inspect the final changes, run the demo, verify attribution and explain the rules before signing. Team review and acceptance remain pending. We declare the major assistance rather than treating generated output as independently validated work.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

Neither selected - sponsor use must be confirmed against actual team account/project evidence.

If yes, list them below:

Sponsor	Resource (API / credits / platform / data)	How It Was Used in the Project
Replit	Intended required platform	Configuration prepared; actual use/proof pending
RunPod	None verified	No GPU workload in current app
API Premium sponsor	Identity/requirement unconfirmed	No integration claimed
Other sponsor resources	Pending team inventory	Do not infer from logos or templates

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

No verified sponsor service is essential in the current local implementation. The fixed-source services and deterministic rules run without a hosted model or GPU. Replit remains a required competition platform step even though other hosts can technically run the application. The team must confirm actual use, credit source and the exact sponsor obligations before choosing Yes or No and signing.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The demonstration accepts only fictional aliases, synthetic questionnaire answers and self-reported test skills. These remain in browser memory and clear on reload. There is no application database, account system, CV upload or intentional assessment transmission to BLS, UN or MOSTI. Fixed server fetches request public source data. External learning links and Google Fonts can reveal ordinary network metadata such as IP addresses to their providers. Hosting providers may retain request logs according to their policies. No precise hosting retention period is asserted before the team selects and verifies the deployment plan. Do not enter real personal records. Refresh and error states expose source age without uploading a user profile.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The rubric, role weights, scenario multipliers and learning durations are editorial and unvalidated. Three roles cannot represent the Malaysian labour market. U.S. BLS projections are long-range occupation evidence, including a related-role proxy, and cannot establish Malaysian demand. Official news titles provide context rather than employment measurements. Stale data, upstream changes and cache limits can reduce freshness. The interface must show provenance and missing evidence, retain dated fallbacks and avoid probability claims. Self-report and checked completion do not verify mastery. No runtime generative model means no generated career advice, but rule bias and misleading interpretation remain possible. Public source attribution, dependency notices and Figma/design ownership require final team review. Replit proof, public judge access, sponsor clarification and leader declarations remain unresolved.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☐ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☐ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☐ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☐ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☐ Any use of official SDC sponsor resources has been declared in Section 5.
- ☐ The prototype described here is accessible to judges through the links provided in Section 1.
- ☐ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team’s knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.

Signature: pending leader review and signature

Date: pending signature

Appendix A Disclosure detail and release gates

Prepared 23 October 2026 MYT as a review copy. The checkboxes remain unticked until the team verifies each statement. No signature or member eligibility is asserted.

The source repository uses Apache License 2.0 for original code. Third-party dependencies keep their own notices. Lockfile versions and licenses appear in DEPENDENCIES.csv. Production bundling and any design/font assets need a final rights review.

The imported Figma interface is a real design input. Exact file URL, creator ownership, permission and any prior-owned material remain for team confirmation. Fonts Manrope and DM Mono load through Google Fonts and require their original licenses/notices.

Public occupation and news sources contain no real CVs or personal records in this application. News headlines are selected context, not a statistically representative corpus. No training or fine-tuning dataset exists. Source URLs, dates and limitations appear in SOURCE-REGISTER.md.

Platform proof: no Replit or RunPod proof is attached because no verified team account/project proof has been captured for this review copy. Template EXAMPLE ONLY proof files are not evidence.

Required before signing: verified deployment and project links, exact reviewed commit, private-to-public repository approval and scan, final tool/sponsor inventory, member IP/workshop confirmations and leader details. Attach real Replit proof to this declaration. If RunPod is actually used, attach the required redacted dashboard or Serverless endpoint evidence.

Trend rule: retrieval/check within 30 days, publication within 550 days, projection horizon includes the current year, and no stale/fetch-failure flag. Positive growth prioritizes Data Analyst exploration and statistical reasoning among ready Foundation steps. Negative growth moves that exploration later. Other roles remain direction unknown. Zero, missing or ineligible evidence removes the adjustment. This is an editorial exploration/practice rule, not measured Malaysian hiring or skill demand. Reconcile against docs/TREND-METHODOLOGY.md and final tests.

API Premium sponsor integration is mandatory in the inspected portal, but identity/access remain unresolved. This blocks a compliance claim.
